## MEETINGS

- **General Meetings** are held the **FIRST TUESDAY** of every **even** month.
- **Next General Meeting:** **5<sup>th</sup> February 2008** at 7.30 pm, Amenities Building, Canine Complex Erskine Park. The Club welcomes ALL members and their guests.
- **Committee Meetings** are held alternate months.

# President's Report

As this is the last newsletter for the year, I would like to take this opportunity to wish all members and their families, both human and canine, a very merry Christmas and a safe, happy and prosperous new year!

Thank you to my hard working committee who have made my job so easy during the year - I look forward to working with you all in 2008 - your assistance and dedication to our club and the breed has been greatly appreciated.

As usual, this issue of Bordertales includes lots of important notices and information including nomination of judges for the forthcoming round of shows. The selection of judges for our shows and trials is important to ensure good entry support across all disciplines. Please take a few minutes to think about who you would like to judge at these events, fill in the forms and get them back to our Secretary - have your club voice heard!

The club does not hold a meeting in January, but we will be publishing another issue of Bordertales during January to provide you with updates on a number of issues.

Until next month.....

Lauren Somers

If you can start the day without caffeine,

If you can get going without pep pills,

If you can always be cheerful, ignoring aches and pains,

If you can resist complaining and boring people with your troubles,

If you can eat the same food everyday and be grateful for it,

If you can understand when your loved ones are too busy to give you any time,

If you can take criticism and blame without resentment

If you can ignore a friend's limited education and never correct him,

If you can resist treating a rich friend better than a poor friend,

If you can conquer tension without medical help,

If you can relax without liquor,

If you can sleep without the aid of drugs,

... then You Are Probably The Family Dog!

# HEALTH UPDATE

25 September 2007

## **Re: Quarterly Report on disease research in dogs.**

The first 6 months funding from PBHF that supports Jeremy Shearman's PhD research has allowed him to very quickly identify the mutation causing TNS in Border collies. He has continued refining the test to develop a single multiplex test that identify carriers for TNS, CL and CEA (CEA testing is patented by Optigen and test results cannot be issued by us). The components and instructions for this test are ready to be made available under licence to other research labs in the not too distant future so that typing can be done in other testing labs around the world.

*TNS testing.* The numbers of samples coming in for TNS testing has slowed in the past month. 150 samples were received in August and 100 so far in September. Rates of detection of carriers are shown in the attached table. Many samples sent from mainland Europe are being held up in Australian Quarantine causing delays. TNS certificates for 2000 samples have been printed and will be distributed.

Some interest has been shown in using TNS in Border collies as a model to study the equivalent disease in humans. Information on symptoms, blood counts etc can provide useful information.

We have been very fortunate with the study we have initiated on cerebellar abiotrophy (ataxia) in kelpies. The study was started only last year in collaboration with the Working Kelpie Council of Australia. The condition causes instability of the dogs limbs and head tremors. Symptoms vary widely from fitting to hardly noticeable. It occurs commonly in both working kelpies and bench kelpies. Due to a generous donation from Mr Terry Snow, it has allowed Jeremy to take a fast high-throughput approach that should locate the genetic defect within 6 months. Testing 14 affected dogs and 20 controls for 50,000 genetic markers in a few weeks will allow location of the gene. Then a search for the mutation can begin in earnest. A video on the disorder has been prepared for a media release and a copy will be sent by mail to the PBHF.

Other projects underway that have made progress are collection of samples for the study of glaucoma, collection of samples for the study of monorchidism, and samples of ataxia in Border collies. The microarray technique could be applied to locate the genes for these diseases when enough samples are collected. A collaboration is being sought with Bill Ballard at UNSW and researchers at QIMR (Brisbane) to identify the genetic defect causing deafness in Australian Cattle Dogs.

The presentation of our research at the World Small Animal Veterinary Association International Conference in August and at the Genemappers meeting in Brisbane were very well received. Prof Yamato of the Japanese Border Collie Health Network visited our lab for advice on testing for CL and TNS in Japan.

Jeremy Shearman whose scholarship is funded by the PDHF has played a major part in all of the above projects and his input has been invaluable particularly for the TNS research and the ataxia research.

Senior Lecturer in Genetics  
Head of Canine Research Lab

# ROSEHILL PET EXPO 2007

Our club was represented at the Sydney Pet Expo again by a few dedicated members, making the 3 days very enjoyable. Our breed was very popular with the public & we were kept very busy discussing our wonderful breed. I was pleased at the number of people doing serious homework on what breed to buy & asking some very good questions. All our Border Collies presented themselves with perfect manners & great enthusiasm throughout the 3 days.

Many thanks to the following people for coming along - Brett, Dale, the 3 Ann's, Julia, Karen & Julie from Rescue. Huge hugs for all your delightful dogs whose manners were impeccable - Jemmie, Abbydos, Lunar, Webster, Walker, Shiva, Dharma, Angus, Giny, Trinity, Piper, Quiz, Connor, Willow, Jordie, Flame & Jinx. It was excellent to have Julie Gray come along from rescue. Our breed is very lucky to have such a dedicated rescue coordinator.

I would like to encourage anyone within the breed to come along to our next promotions day . Individual animals may be DNA tested or they may be declared Clear of either condition by pedigree if both parents are Clear. Copies of DNA results must be provided for the parents or clear ancestors when listing litters on puppy sales.

For litters born from 1<sup>st</sup> November 2005 both parents must be DNA typed for CL.  
Permitted matings will be:   CLEAR / CLEAR
